

Working Life Portal

Interaction from education to employment

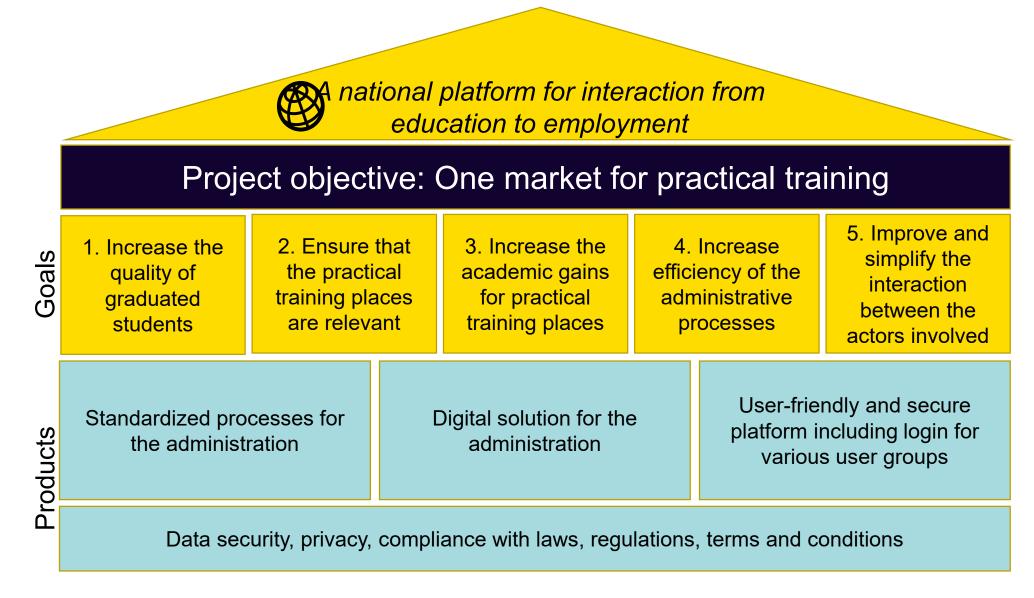

VISION OF WORKING LIFE PORTAL

THE MOST IMPORTANT PLATFORM FOR INTERACTION FROM EDUCATION TO EMPLOYMENT

The project vision is further broken down into goals and products

The overall goal is to develop a interaction portal which improves experiences for all parties involved in practical training.

Administrative tasks related to organizing practical training are mostly of manual character and are rarely standardized

Students experience the benefit of practice, at the same time it feels to them like a **lottery**

Interaction portal for students and working environment

Reduced use of resources and improved experiences for students, staff, practice placement

Increased quality of studies which contain practical training

Working Life Portal

Today

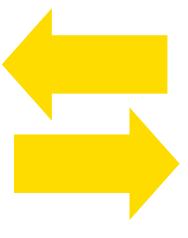

God experiences and benefits for all parties involved

Students

- ✓ Increase the quality of graduates
- ✓ Ensure that the practical training places are relevant

Educational institution

- ✓ Increase efficiency of administrative processes and their quality
- ✓ Simplify and professionalize the interactions between actors involved

Employment/practical placement

- ✓ Increase the academic gains for practical training places
- Meeting with potential employees

The project started as an internal initiative at OsloMet and ended up with external funding

1

Internal group

An internal group at OsloMet identified the need for coordination of administrative processes regarding practical training

2

Preliminary project

OsloMet conducted a preliminary project to identify the user demands for the various actors involved in practical training

3

Funding secured

The analysis from the preliminary project resulted in an application for funding to Difi. 7.65mNOK is granted OsloMet and the development of Arbeidslivsportalen

STAGE

METHODOLOGY

It is critical to fully understand the users demands prior to developing the technical solution

Design thinking

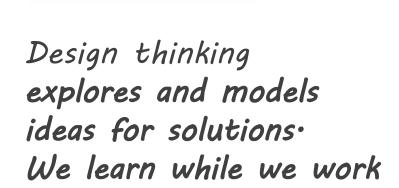

Design
thinking starter
by focusing on the
people for insight

You define the problem or challenge, and you get new perspectives

We work in teams with complex backgrounds to ensure that we have the breadth to solve complicated flocks

Så tester vi for å se om løsningen har livets rett

We explore the possibilities, without prejudice, to create room for an open exchange of ideas

Then we think
together about how
to isolate potential
solutions which we
adjust and improve

OSLO METROPOLITAN UNIVERSITY STORBYUNIVERSITETET

Insights - elements that should be included in the platform

Secure login including access control of various user groups

Profiles for both students and practical training places

Automatic matching of students and practical training places

Digital assessment and evaluation

Secure storage and sharing of sensitive data
